## ECHO Discussion Topics/Reminders

### Reminder: ECHO SSL Certificate Expiration

On April 10th 2014 our current ECHO SSL certificates expire. We are in the process of renewing them. We will roll these out through test bed, partner test and operations before the expiration date. When we obtain the certificates we will have a better idea of when that roll out occurs.

In the mean time you should be aware of the following:

1. Browser access to ECHO services should continue with no modification
2. Your custom applications that interface with ECHO should continue to operate with no modification. However, if you are not running the latest versions of openssl, curl etc you may see problems.
3. Some partners experienced problems with URS last week when they applied new certificates. This was because of the use of 'old' versions of curl etc. In these cases, we advise you to update your software if possible. If that is not possible you need to obtain certificate information from us (intermediate and root certificates). When we purchase the certificates we will have that information. We recommend using curl version 7.18.0 or higher.

Please email [Doug Newman](#) for more information.

### Reminder: ECHO-hosted Browse

Still looking for feedback from DAACs regarding ECHO-hosted browse.

### Reminder: Search Parameter Retirements

In preparation for the CMR and increasing search performance, we have looked closely at supported search parameters within ECHO and the frequency of their usage. [Please see this link for more information.](#)

## ECHO Upcoming Events

### Planned Maintenance

1. 10.75 deployment to Operations (live)
2. Miscellaneous OS patching (live)
3. **Partner Test database migration (outage)**
